

BIT N BUILD HACKATHON

Hackathon Rules • Submission Guide • Tracks

1. GENERAL RULES & SUBMISSION CRITERIA

- **Hackathon Duration:** 48 hours — from **11 September, 12:00 PM** to **13 September, 12:00 PM**. All work must be completed and submitted within this period.
- **Choose exactly ONE track:** Access, Bal Suraksha, or Jan Jeevan. Your project must clearly belong to the selected track.
- **Find your own problem:** There are no predefined problem statements. Identify a genuine problem in India, understand the people affected, define your own problem statement, and build your own solution.
- **Creativity is encouraged:** Participants are free to decide what problem is worth solving and how technology can address it.
- **Working prototype:** The submitted solution must be functional. A website or mobile/web app is acceptable.
- **Required submissions:** PPT, public GitHub repository link, working prototype link, and a **3-minute video of your prototype**.

2. PPT SUBMISSION

A PPT template may be provided by the organizers. If no template is provided, use the following six-slide structure. Keep the presentation concise and self-explanatory because judging is online and there is no live Q&A.;

Slide	What to include
1. Title Slide	Project name, team name, members, selected track, and a one-line project summary.
2. Problem Statement	Clearly define the real problem, who is affected, why it matters, and supporting evidence or observations where available.
3. Solution	Explain your proposed solution, key features, user flow, and how it directly addresses the problem.
4. Technology & Implementation	Tech stack, system architecture, AI/ML components if used, data flow, and important technical choices.
5. Feasibility, Scalability & Impact	Explain feasibility, scalability, expected impact, target users, and how the solution could grow beyond the prototype.
6. Prototype & Future Scope	Show prototype/demo evidence, key screens or flow, working links, GitHub reference, and future improvements.

3. PROTOTYPE VIDEO

- **Submit a 3-minute video of your prototype.**
- The video should clearly demonstrate the working prototype and its core functionality.
- Keep the demonstration focused on the problem, solution, and key features.

4. GITHUB SUBMISSION

- The GitHub repository must be **public**.
- The repository should contain the project source code and a clear README explaining the project, setup, technology stack, and how to run it.
- **Team leader or any team member** may submit the repository link.
- The GitHub link must be entered in the designated GitHub field on **Unstop** during submission.
- Do not commit passwords, API keys, private credentials, or other secrets to the repository.

5. HACKATHON TRACKS

Choose ONE track. The tracks define the problem domain; they do not prescribe a problem statement or solution.

TRACK 1 — ACCESS

Disability, Accessibility & Inclusion

People with disabilities across India continue to face barriers in everyday life, including access to public spaces, transportation, education, employment, healthcare, digital services, and essential facilities. Many existing systems and environments do not adequately account for diverse accessibility needs. Participants are encouraged to identify a genuine accessibility-related challenge faced by people with disabilities and explore its root causes and impact.

Your Challenge: Identify a real accessibility or disability-related problem in India, define the problem clearly, and develop your own innovative solution.

TRACK 2 — BAL SURAKSHA

Child Safety, Protection & Well-being

Children in India can face several forms of vulnerability, including child labor, exploitation, abuse, bullying, unsafe environments, missing-child situations, and risks arising from the digital world. Many children and families may not have timely access to adequate protection, support, awareness, or safe systems. Participants are encouraged to identify a real child-safety or child-protection challenge and understand the people and circumstances affected by it.

Your Challenge: Identify a real problem affecting the safety, protection, or well-being of children in India, define the problem clearly, and develop your own innovative solution.

TRACK 3 — JAN JEEVAN

Technology for Everyday Life & Real-World Indian Challenges

India faces a wide range of everyday challenges affecting individuals, communities, workers, businesses, and underserved populations. These challenges can span areas such as healthcare, education, agriculture, employment, financial inclusion, public services, environment, aging, accessibility, and digital inclusion. Participants are encouraged to look beyond obvious problems, understand real-world needs, and identify challenges where technology can create meaningful impact.

Your Challenge: Identify a significant real-world problem faced by people or communities in India, define the problem clearly, and develop your own innovative solution.
